

VITAL WINDOW 80

THE BEGINNING OF IMPOSSIBLE

THE BEGINNING OF IMPOSSIBLE

ADVANTAGES

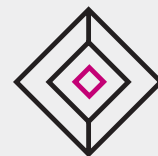

OUTSTANDING TECHNICAL PERFORMANCE

The high thermal insulation ($U_w=0.77$ for a pane with $U_g=0.5$) is the result of the 6-chamber profile design and a system width of 3.14 in. This is one of the reasons why Vital Window is perfect for low-energy buildings.

A LOT OF LIGHT

Rooms using the Vital window system get more sunlight. This is a result of the low profile fold (just 4.48 in).

ALL-WEATHER RESISTANCE

Innovative TPM plastic seals ensure greater sealing and resistance even in gale force winds. The central seal additionally protects the fittings from water.
